

Overview

dot Cloud Monitoring Software is a web-based solution platform, purpose-built for dot series data loggers, such as the VWdot series, Adot series, WBdot, TILTdot, RAINdot, SHAKEdot, and others. With its intuitive interface and simple setup, this software grants users 24/7 access to real-time monitoring on both computers and mobile devices. Notably, it offers automated alerts when data exceeds predefined limits, ensuring timely notifications and efficient monitoring.

dot Cloud Platform Service

- Engineering Units Conversion and Display
- Real-Time Monitoring Data Display
- Historical Data Query and Download
- Historical Graph Query and Download
- Safety Threshold Settings with Indicator Lights
- Map Display Showing Instrument Installation Locations, Real-Time Monitoring Results, and Safety Indicators
- Battery Life Percentage Display and Low Voltage Email Notification
- Remote Measurement Frequency Adjustment
- Project Sharing Feature for Synchronized Viewing by Other Users
- Mobile Device App Service
- FTP and API Data Forwarding Function
- Email, SMS, and App Notifications for Exceeding Management Thresholds

dot Series Wireless Monitoring System Architecture

Main Functionalities Real-Time Monitoring Data Display Access real-time data recorded by your dot.

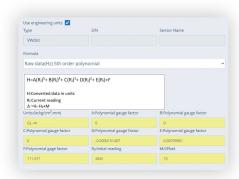

Security Management Value Configuration

Provides instant visual cues about the status of the object and display safety status indicators.

- Danger
- Warning
- Caution
- Normal

Built-in Engineering Units

Allows user to tailor the data analysis to their specific needs.

Instant Alerts

Email and SMS notifications for low voltage and exceeding management values.

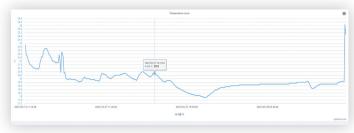

Below 5%

Automatic Notifications

History Record and Chart Inquiry and Download

Allow users to retrieve and download historical data for specific time periods

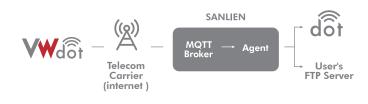

Map Display

dot brings your data to life through dynamic geolocation and real-time monitoring

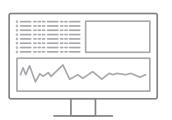

FTP Client Transmission Service

Your private FTP server can receive the same data from dot.

API Service

Allow users to share real-time data with their partners on dot.
